

Mcompass Anorectal Manometry Adopted at Beverly Hills Center for Digestive Health

The mcompass technology was developed by Medspira and it has created a revolution in anorectal manometry treatments. This breakthrough transpired in the form of Dr. Mark Davidson's advanced procedures at Beverly Hills Center for Digestive Health, allowing for improved efficiency, convenience, and comfort for his patients. Thanks to groundbreaking research continually being invested at Medspira, anorectal manometry can be a more optimized experience.

What makes mcompass revolutionary?

Los Angeles gastroenterologist Dr. Mark Davidson benefits from mcompass technology by being able to provide patients with enhanced services and higher quality exams. The mcompass system also works for the following physicians: colorectal surgeons, primary care physicians, gerontologists, URO/GYNs, and OBGYNs. It is one of the first portable devices for this type of procedure and can be installed with immediate improvements seen for procedures.

The device is dedicated to enhancing the quality and efficiency of anorectal manometry. It delivers high quality testing at a reasonable price, other competing testing products operate at a more expensive price and apply to a range of exams, making them less accurate compared to mcompass. In addition, it uses a state-of-the-art probe that is designed to maximize the quality of testing and ensure patient comfort.

What is anorectal manometry?

Anorectal manometry allows the muscle function in the anorectal area to be evaluated and diagnose for any problems. The procedure itself requires having a thick, flexible tube placed into the rectum. Multiple sensors on the tube can record and detect pressure in the rectum and anal canal. Patients are required to perform squeezes, pushing down, balloon test, stress-incontinence test, or other exercises. At Beverly Hills Center for Digestive Health, Dr. Davidson provides this exam as one of the few physicians with the qualifications to do so.

A marketing representative at the practice provided his evaluation of the technology: "Other machines were not cost-efficient nor did they delivered the most optimal experience for our procedures, mcompass has delivered real results in the form of improved patient satisfaction".

About Medspira

Medspira has been a partner of the leading medical institutions for many years. A number of medical devices and technology has been developed under the research and expertise of Medspira. It distributes across the U.S. as well as international markets. All products are developed in ISO 13485 registered manufacturing facilities and subject to FDA approval.

About Beverly Hills Center for Digestive Health

The Beverly Hills Center for Digestive Health is the practice of Dr. Mark Davidson, MD. He completed his 3-year residency program in internal medicine at Veterans Affairs Medical Center in Los Angeles and is also a graduate of David Geffen School of Medicine at UCLA. He has also trained for an additional 3 years completing his gastroenterology fellowship at Kaiser Permanente and UCLA School of Medicine. He

carries board certification in both internal medicine and gastroenterology. His specialties include the treatment of constipation, fecal incontinence, hemorrhoids, pelvic floor dysfunction, gallstones, hepatitis, and other conditions. He serves patients around the areas of Los Angeles, Beverly Hills, and beyond.
