

CLINICALLY INSPIRED  
PORTABLE  
ANORECTAL MANOMETRY  
DEVICE DEVELOPED BY

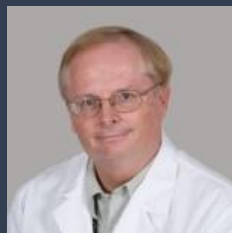

## MCOMPASS HIGHLIGHTS

by Dr. Mamel

- EASE OF OPERATION
- EFFICIENT TURNAROUND
- DISPOSABLE, SINGLE-USE CATHETER
- INTUITIVE HARDWARE & SOFTWARE
- RELIABLE SUPPORT

*"The Medspira anal manometry system first came to my attention at the American College of Gastroenterology meeting in the Fall of 2016, when our GI fellows discovered your booth and brought the information back to me. The trial that was provided by your representative demonstrated the ease of its operation and the efficient turnaround for serial procedures in our established anal manometry lab, where we were using high resolution manometry in the hospital setting. The disposable single-use catheters used in the Medspira system do not require the reprocessing delay of the high-resolution system, providing more efficient use of our personnel, and allow us to process a higher volume. The information derived allow us to manage all disorders of defecation. Our assistants in the clinic, who were not familiar with other procedural aspects of our practice, learned how to maintain the equipment easily and look forward to procedure days. It has been over a year since we started using Medspira and we have had no problems with the hardware or software. I have had no reservations about our purchase and the support Medspira has provided."*
